                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to alkaline proteases produced by strains of Bacillus. The proteases ability to digest casein is not inhibited by oleic acid and they have a high stability to exidising agents. The alkaline protease of the invention has the following properties: (a) it is active over the pH range 4-13 and has at least 80% of its optimum activity over the pH range 6-11; (b) after 30 minutes at 40 deg. C it is stable over the pH range 6-11; c) its isoelectric point is 8.9-9.1; (d) its ability to digest casein is not inhibited by oleic acid; (e) it has molecular weight about 43,000 by SDS-PAGE. The alkaline proteases can be used as enzymes in washing compositions for use in automatic dishwashers and for washing clothes. The stability to oxidising agents allows the bleaches. The present sequence represents an alkaline protease of the invention. (Updated on 20-MAR-2003 to correct DR field.)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  à
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ઠે
                                                                                                           This is the amino acid sequence of a Bacillus sp. alkaline protease Y that is said to have good alkali and surfactant resistance and improved detergency. It shows 7% identity to a newly isolated protease (see AAW8547) of Bacillus sp. JP170 (NCIB 12513). The invention provides production of such proteases. The protease are used in laundry and isolahwashing detergents, for institutional and industrial cleaning, and for leather processing, as well as for debittering and enhancing the for leather processing, as well as for debittering and enhancing the chrough hydrolysis of protein hydrolysates, for flavour development through hydrolysis of proteins, degradation of undesired peptides and in enzymatic synthesis of proteins, e.g. towards bleaching agents of the protease activity is diminished. Such cells can be used for the protease activity is diminished. Such cells can be used for the production of heterologous recombinant proteins

                                                                                                                                                                                                                                                                                                                                                      This invention describes novel Bacillus sp. alkaline proteases useful in detergent compositions, especially in laundry, bleaching or automatic dishwasher detergents. The novel proteases have an increased detergency $ (34 - 38*) compared to prior art alkaline proteases (31 and 23*). This sequence represents a fragment of the alkaline protease Ya from Bacillus sp strain Y-(FERM BP-1029) described in the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           420
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               240

                                                                                                                                                                                                                                                                                                                                                                 The sequence is that of alkali-protease Ya enzyme which can be used in the recombinant production of Ya enzyme. Ya enzyme is excellent in alkali resistance and surface active agent resistance and improves detergency
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             301 SGDGGWGRVILDKSLNVAYVNEATALAIGQKAIYSFQAQAGKPLKISLVWTDAPGSTIAS 360

Patent No. 5893701

APPLICANT: Slowa, Alan
APPLICANT: Lynna, Christianson
TITLE OF INVENTION: Nucleic Acids Encoding A Polypeptide
TITLE OF INVENTION: Having Procease Activity
NUMBER OF SEQUENCES: 57

CORRESPONDENCE ADDRESS:
ADDRESSEE: No. 58917010 No. 5891701disk of No. 5891701th A
STREET: 405 Lexington Avenue

CIIY: New York
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   OPERATING SYSTEM: DOSSON OF STATEMERS SOFTWARE: PSASLEDG FOR Windows Version 2.0 CURRENT APPLICATION NUMBER: US/08/873,479

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 6, M. T. yonsei Transglut Hyperther Protease.

RP-III re Xanthomon

Streptomy Streptomy

```
This invention describes novel Bacillus sp. alkaline proteases useful in detergent compositions, especially in laundry, bleaching or automatic dishwasher detergents. The novel proteases have an increased detergency $ (34 - 38%) compared to prior art alkaline proteases (31 and 23%). This sequence represents a fragment of the alkaline protease Ya from Bacillus sp strain Y-(FERM BP-1029) described in the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            1 NDVARGIVKADVAQNNYGLYGQGQVVAVADTGLDTGRNDSSMHEAFRGKITALYALGRTN

The present sequence represents the Bacillus lion Y protease. The invention claims for enzymes covalently modified on their surface by the attendent of a large number of small polymeric molecules, e.g. polyechylene glycols (PEG). The polymeric molecules are coupled to the N-terminal amino group and the amino groups of lysine residues found on the surface of the enzyme. In the example given, the lion Y protease was modified using methoxypolethyleneglycol (MPEG) as the polymeric molecule. The N-terminal amino group and the amino groups of the fourteen lysine residues present on the surface of the lion Y protease were modified. Modification of the enzymes increases the stability and/or reduces the sensitising potential (allergenicity) of the enzyme, without significantly reducing enzymatic activity. Also, using a large number of relatively small polymeric molecules, rather than a few very large ones, provides a more even effect with reduced activity loss. The modified and hair care products, e.g. soaps, components of a wide range of skin and hair care products, e.g. soaps, cosmetics, creams, gels, libsticks, hair gels, sun oils, shampoos, hair dyes, insect repellants, etc
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          VGATENYRPSFGSIADNPNHIAQFSSRGATRDGRIKPDVTAPGTFILSARSSLAPDSSFW 240

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present sequence represents a protease Lion Y protein. The protein may be used to produce the conjugates of the invention. The specification describes polypeptide-polymer conjugates which have improved washing performance and reduced respiratory allergenicity compared with the unconjugated polypeptide. The polymer provides, in water, a conformation that shields the molecular surface effectively, preventing association of antibodies that can induce an allergic reaction. The conjugates are used in industrial compositions, particularly detergent formulations (laundry, dishwashing or hard surface cleaners), but also in agricultural chemicals, skin care products (cosmetics and toileries), oral and dental pharmaceuticals, or textile processing and treatment compositions
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ô

                                                                                                                                                                                                                                                                  ดลุก
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       9
enzyme, with copolymer of e.g. cleaning compositions,
                                                                                                                                                                                                          The present sequence is a Bacillus Lion Y enzyme, which is a protease capable of inducing an allergic response upon inhalation. The enzyme c be covalently coupled to a co-polymer comprising ethylene oxide (EO) a propylene oxide (PO) to reduce its allergenicity. This enzymer conjugate can be used in industrial compositions such as detergents, cosmetics, toiletries, textile treatment compositions, agrochemicals, oral and dermal pharmaceuticals and food and feed additives
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          1 NDVARGIVKADVAQNNYGLYGQGQLVAVADTGLDTGRNDSSMHEAFRGKITALYALGRTN

The novel proteases have an increased detergency $(34 - 33$) compared to prior art alkaline proteases (31 and 23$). This sequence represents a fragment of the alkaline protease SD-521 from Bacillus sp strain SD-521 (FERM BP-11162) described in the method of the

                    production of such proteases. The protease are used in laundry and dishwashing detergents, for institutional and industrial cleaning, and dishwashing detergents, for institutional and industrial cleaning, and dishwashing, as well as for debittering and enhancing the degree of hydrolysis of protein hydrolysates, for flavour development enrough hydrolysis of proteins, degradation of undesired peptides and in erzymatic synthesis of peptides. They have enhanced stability towards oxidation under alkaline conditions, e.g. towards bleaching agents of the protease activity is diminished. Such cells an he used for the production of heterologous recombinant proteins

detergent compositions, especially in laundry, bleaching or automatic dishwasher detergents. The novel proteases have an increased detergency $ (14 - 18%) compared to prior art alkaline proteases (11 and 21%). This sequence represents a fragment of the alkaline protease B-1 from Bacillus sp strain D6-(BERM-P1592) described in the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             120

This is the amino acid sequence of a novel protease of Bacillus sp. JP170 (NCIB 12513), as deduced from the nucleotide sequence of an isolated gene (see AAW82382). The entire protein, including the signal peptide and protein, and protein, including the signal peptide and protein and protein and protein protein are combinant production of the protease Y (see AAW89548) (from Bacillus. The invention provides vectors, recombinant host cells and methods for the recombinant production of the protease is used in laundry and dishwashing deergants, for institutional and industrial cleaning, and for leather processing, as well as for debittering and enhancing the degree of hydrolysis of proteins, degradation of undesired peptides and in enzymatic synthesis of proteins, that as enhanced stability towards oxidation under alkaline conditions, it has enhanced stability towards oxidation under alkaline conditions, provides mutant cells in which the protease activity is diminished. Such cells can be used for the protease activity is diminished. Such
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     209 nbvargivkabvagnneglyggggjvavabiglbigrnbssmeafrgkifalyalgrin

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         360
                                                                                                                                                                                                                                                                                                  This invention describes novel Bacillus sp. alkaline proteases useful in detergent compositions, especially in laundry, bleaching or automatic dishwasher detergents. The novel proteases have an increased detergency $ (34 - 38$) compared to prior art alkaline proteases (31 and 23$). This sequence represents a fragment of the alkaline protease A-2 from Bacillus sp NCIB12513 described in the method of the invention

This invention describes novel Bacillus sp. alkaline proteases useful in detergent compositions, especially in laundry, bleaching or automatic dishwasher detergents. The novel proteases have an increased detergency $ (34 - 38%) compared to prior art alkaline proteases (31 and 23%). This sequence represents a fragment of the alkaline protease KP9860 from Bacillus sp strain KSM-KP9860 described in the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              NDVARGIVKADVAQNNYGLYGQGQVVAVADTGLDTGRNDSSMHEAFRGKITALYALGRTN

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This invention describes novel Bacillus sp. alkaline proteases useful in detergent compositions, especially in laundry, bleaching or automatic dishwasher detergents. The novel proteases have an increased detergency $ (34 - 38%) compared to prior art alkaline proteases (31 and 23%). This sequence represents a fragment of the alkaline protease A-1 from Bacillus sp NCIB12289 described in the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   120

The proteases ability to digest casein is not inhibited by oleic acid and they have a high stability to oxidising agents. The alkaline protease of the invention has the following properties: (a) it is active over the pH range 4-13 and has at least 80% of its optimum activity over the range pH 6-12; (b) after 30 minutes at 40 deg. C it is

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              325
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           stable over the pH range 6-11; c) its isoelectric point is 8.9-9.1; (d) its ability to digest casein is not inhibited by oleic acid; (e) it has molecular weight about 43,000 by SDS-PAGZ. The alkaline proteases can be used as erzymes in washing compositions for use in automatic dishwashers and for washing clothes. The stability to oxidising agents allows the erzyme to be an effective component of washing compositions including blackhes. The present sequence represents an alkaline protease. The invention relates to alkaline proteases produced by strains of Bacillus. The proteases ability to digest casein is not inhibited by oleic acid and they have a high stability to oxidising agents. The alkaline protease of the invention has the following properties: (a) it is active over the pH range 4-13 and has at least 80% of its optimum activity over the pH range 6-11; (b) after 30 minutes at 40 deg. C it is stable over the pH range 6-11; c) its isoelectric point is 8.9-9.1; (d) its ability to digest casein is not inhibited by oleic acid; (e) it has molecular weight about 43,000 by SDS-PAGE. The alkaline proteases can be used as enzymes in washing compositions for use in automatic dishwashers and for washing clothes. The stability to oxidising agents allows the bleaches. The present sequence represents an alkaline protease. (Updated on 20-MAR-2003 to correct DR field.)
                                                                                                                                               Alkali protease from Bacillus used in washing powders.

Patent No. 6303752
GENERAL INFORMATION:
APPLICANT: Olsen, Arne Agerlin
APPLICANT: Fatum, Tine Muxoll
APPLICANT: Peussen, Heinz-Josef
APPLICANT: Roggen, Erwin Ludo
TITLE OF INVENTION: A Modified Polypeptide
NUMBER OF SEQUENCES: 5
CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                    US-09-024-532-3

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                              US-09-985-689A-4
